VAIBHAV JAIN

COMPUTER SCIENCE ● SOFTWARE ENGINEER

(+91) 798-70-58942 | jainvaibhav62@gmail.com | jainvaibhav62| jnvaibhav

EDUCATION

Bachelor of Technology – Computer Engineering: 3.22/4 *Jul 2015–Apr 2019*

NMIMS University, Shirpur

- *Core Subjects*: Artificial Intelligence, Data Mining, Theory of Computation, Data Structure
- Secured highest scores in many major courses like Data Structures, Computer Programming and Discrete Mathematics

EXPERIENCE

Accenture Inc., Pune *Jul 2019-Present*

Fortune Global 500 company

SAP MM Functional Consultant

Client – Anglo American plc.

- Worked closely with SAP development team to evaluate alignment of enhancement and proposed solutions with business requirements. Coordinated support of SAP systems across multiple locations
- Provided timely resolution of reported incidents and service request in purchasing, inventory, invoice verification and production planning areas.
- Involved in procure-to-pay (P2P) process development for various documents.

Internships

Catchsavvy Inc., Ahmedabad *May 2018-Jul 2018*

US-based software development company

Software Developer - Intern

- Developed java server-side components, including JSP and Servlets
- Responsible for unit testing of the work done
- Carried over unit testing, after code review is through, to check the functionality of the modules and to find the bugs

Nextsavy Technologies LLP, Ahmedabad *Jun 2017-Jul 2017*

Global offshore outsourcing and custom software development company

Android Developer - Intern

- Architected and built Purple Forecast Android application
- Integrated 3rd party libraries including Google and Yahoo
- Implemented new features for multiple mobile and tablet apps

PROJECTS

- ***Fake News Detection:*** Built a Data science model coded in python, using TfidVectorizer & PassiveAgressiveClassifier to classify news into 'Real' or 'Fake' with 92% accuracy.
- ***Handwritten Digit Recognition:*** The Data science model coded in python, using CNN algorithm, and to see the result at real time, I built a graphical user interface.
- ***Disease Prediction:*** The Data science model which take the symptoms as input from user and predict is there any chance of disease or not by giving percentage as an output, the model is built up using Naïve Bayesian.
- ***Let Me Check Your Skills*:** A Simple Demonstration of Google Artificial Intelligence Experiment to check whether neural network running on Android can recognize what you are doodling.
- ***Food Tinder*:** A desktop application, coded in python, in which administrator/counterman can generate receipt of the food items ordered by the customer.
- ***Honest Feed App***: An android application using which users can get honest anonymous feedback from their friends.
- ***Trickle*:** An Android application using which one can capture images and apply various filters using image processing.
- ***Purple Forecast***: To offer weather forecast with extreme accuracy and great experience across android smartphones and tablets.
